

SQL

Keys $\Rightarrow$ Used to uniquely identify any record or row of data from the table.

Candidate key:- Minimal set of attribute which can uniquely identify a tuple is known as candidate key.

* Value of candidate key is unique & non-null.

Super key:- set of attributes which can uniquely identify a tuple is known as super key.

* A candidate key is a super key. But Every super key is not a candidate key.

Candidate key + Multiple Extra Columns = super key

Primary key:- This is a unique & non-null key which identifies a record uniquely in table.

Composite key

* Two or more ~~keys~~ attributes together form a composite key.

→ All candidate keys are composite keys if they have more than 1 attribute.

Foreign key

* This is a column or a combination of columns whose values match a primary key in a diff table.
