

people's data

Group By

* Group By is used to provide summary for rows that have some characteristics.

* This is generally used with the aggregate functions $\Rightarrow$ COUNT(), SUM(), MAX(), MIN(), ~~40~~ AVG().

Syntax $\rightarrow$

```
SELECT column_name(s)  
FROM table_name
```

WHERE conditions

GROUP BY column-name(s)

ORDER BY column-name(s);

Ex:- SELECT count(salary) AS count,
sum(salary) AS total-salary, location
FROM GOT

GROUP BY location ORDER BY location;

returns the
salary of all the
people in the
same location

returns the
location collectively

HAVING

* This enables you to specify conditions that filter which group results appear in the results.

* HAVING places conditions on groups created by the GROUP BY clause.

Syntax →

SELECT Column-name(s)

FROM table-name(s)

WHERE conditions

GROUP BY column-name(s)

HAVING Condition

Order By Column name(s);
